

## **Dust's Dirty Secret!**

### **Did you get a Deluxe Cleaning?**

Dust can lurk in areas where the average home owner never cleans. So when we arrive to your home we will clean the normal areas as well as those areas that seldom or never get cleaned. Some examples of these areas are:

\*Ceilings, sometimes there is stuck dust bunnies or dust from ceiling fans thrown to the ceilings, or the dust coming out from the a/c vents.

\*Ceiling fans, some have heavy dust accumulation.

\*Walls and corners, these also sometimes have dust from ceiling fans, dust from a/c vents, and cobwebs.

\*Windows, blinds are sometimes very dusty, as well as the window sills.

\*Tall lamps, these also hold dust that is not normally cleaned by the average home owner.

All this means is that there will be much dust including the fine powder like dust in the atmosphere. Once this happens, we let the dust settle towards the bottom. However, sometimes as we walk by or turn on the vacuum it wilds up the dust again and gets it flowing all over the atmosphere. It becomes an impossible task to completely remove dust. This causes dust to re-settle. You are most likely to see dust re-settlement on black or dark surfaces, sometimes on glass surfaces as well.

Good News! If you opt for recurrent services, there will be less and less dust every time. This is because each time there will be less dust re-settlement, since each time more and more dust is able to get collected. Soon you will get to the point were the only dust in your home will be recent dust.
